

BookSphere – Library Management System

Introduction

A library management application for handling books and borrowing activities.

Objectives

Automate operations, improve record management, reduce manual effort, and provide quick search and reporting features.

System Modules

- Book Management
- Issue & Return Books
- Availability Reports

Technology Used

Programming Language: C

Application Type: Menu-Driven Console Application

Expected Outcome

The project will demonstrate the effective use of C programming concepts including structures, functions, arrays, loops, conditional statements, and file handling.
